

# DRIVE-ON CONTAINMENT

---

## + **FLEXIBILITY & DEPENDABILITY**

When working in the field, it's important to have products at your disposal that can stand up to the wear and tear of onsite life while providing the adaptivity needed to change along with operational needs. The new Drive-On Containment product, offered exclusively by Select Energy Services, provides a secondary containment system that's faster, easier and tougher, while providing a smaller overall footprint than any other system currently in use.

## + **PRODUCT MAKEUP**

With a bottom layer composed of woven geo-textile and sides made from sturdy memory foam coated with 60-80mil polyurea, the system offers more durability and protection from penetration.

## **ADVANTAGES**

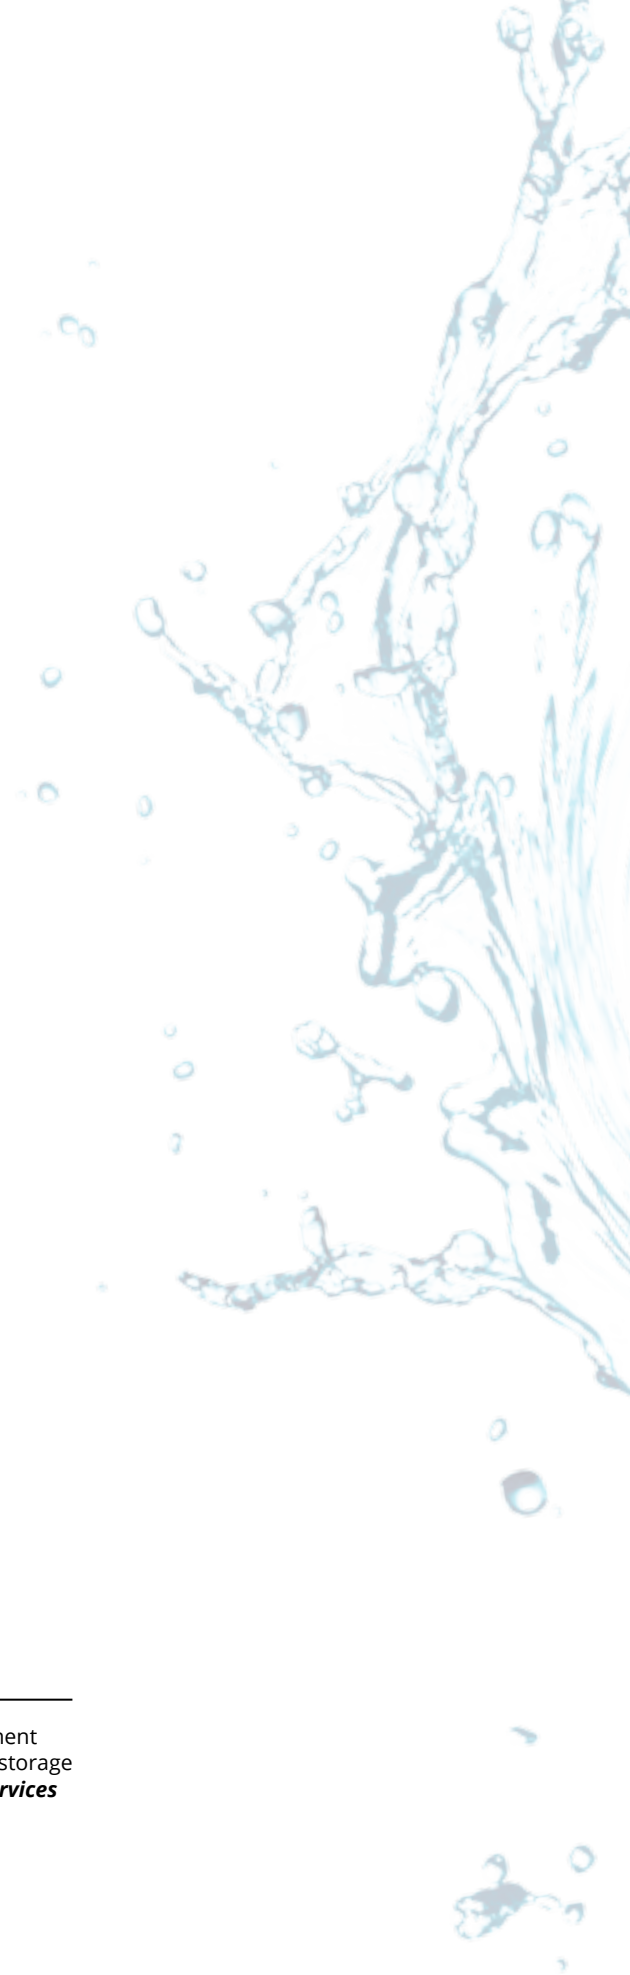

---

Compared to other systems, Drive-On Containment takes significantly less manpower to construct — leading to more rapid deployment. With the availability to custom build a system to your specific size and spec needs, combined with the ability to easily move equipment on and off without taking down the containment walls, you also end up with a far more versatile and less intrusive footprint in secondary containment equipment.

## **USES**

---

- Water Treatment & Recycling Trailers
- Frac Tanks
- Light Plants
- Generators
- Pumps
- Sand & Test Separators
- Discharge Lines

**100% WATER FOCUSED.**

---

Select Energy Services is working to provide complete water management solutions for the oil and gas industry. From transfer and treatment to storage and monitoring, *the strength, size and experience of Select Energy Services is unrivaled.*
